# Agenda

- ❑ What is a heat pump?
- ❑ Challenges to retrofitting multifamily housing
- ❑ CH4A heat pump pilot
- ❑ Pilot results
- ❑ Lessons learned

# What is a heat pump?

## Outdoor Units

## Wall-Mount Indoor Unit

Image source: <https://www.energy.gov/energysaver/air-source-heat-pumps>

# Central VRF System requires major electrical upgrades and construction – only possible for certain buildings

## Mini-split, Multi-split, and Central VRF Attempts

- Central outdoor units (e.g. rooftop) each serving a large number of indoor units (in apartments) via refrigerant piping
- 2-pipe system only allows heating or cooling at one time; 3-pipe system allows both at same time but is more complex and costly
- Flare fittings and long refrigerant runs pose risk of refrigerant leaks (HIGH GWP!!)

# Clean Heat for All Challenge

**WHO:** NYCHA-NYPA-NYSERDA

**WHAT:** Partnership to develop new all-in-one packaged cold climate heat pump installed through existing window.

**HOW:** RFP for bulk purchase

- Minimum Requirements Specifications
- Additional Design Target Specifications (scoring system)
- Initial purchase order of production units

**WHERE:** NYCHA campus developments

**NYCHA estimated internal demand:** 156,000 heat pump units to reach climate goals

**External demand:** Letters of interest from 13 stakeholders: PHAs, government agencies, ESCOs representing over 75,000 housing units. *Price guarantee allows others to purchase at the same price.*

Image Source: Grain Collective

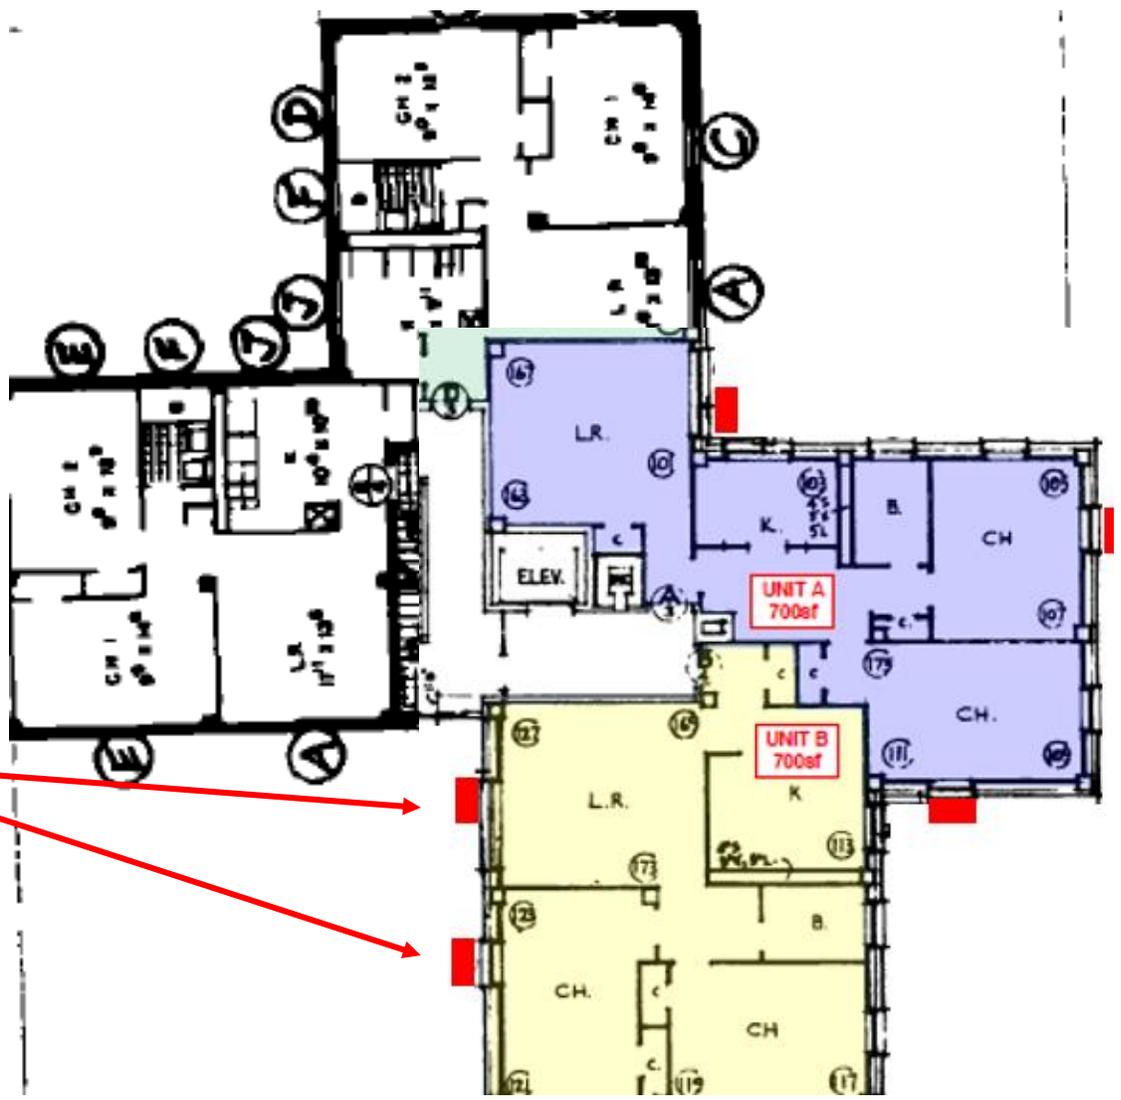

# RFP Desired Product Specifications

- Form factor with approximate size and weight of a typical window AC or through-the-wall AC with all refrigerant piping hermetically connected within the unit and no exterior core drilling required for installation;
- Run on 120 VAC and plug into a standard 3-prong outlet, 15-amp circuit;
- Minimum efficiency of 1.85 COP at 17°F outdoor temperature and 70°F indoor temp in heating mode, at rated capacity;
- Shall operate in heat pump mode down to 0°F and have no backup resistance heat;
- Variable speed compressor with capacity of 9,000 Btu/hr heating at 17°F outdoor temp;
- Condensate line and pump (if needed) are internal and discharge outdoors or nearby indoors with no need for plumber labor;
- Can be installed so it is airtight around its perimeter without any degradation to the overall R-value or infiltration of the building envelope;
- Provide BACNet compatibility for BMS integration with no external proprietary cloud software required; and
- Can be installed by unskilled labor within approximately two hours.

# Two window heat pump products piloted at Woodside

## Background

- ❑ Two adjacent lines of apartments selected at two 6-story buildings
- ❑ 6 apartments per line, 12 apartments in each building, 24 total apartments in the pilot
- ❑ Buildings currently heated by 2-pipe steam
- ❑ Steam service was disconnected for the pilot apartments but left in place for the control apartments
- ❑ One heat pump installed in each bedroom and living room
- ❑ No direct heat provided in kitchens and bathrooms
- ❑ Electric meters installed on each heat pump and on each electric riser
- ❑ Space temperature measured in each room

# Window Heat Pumps

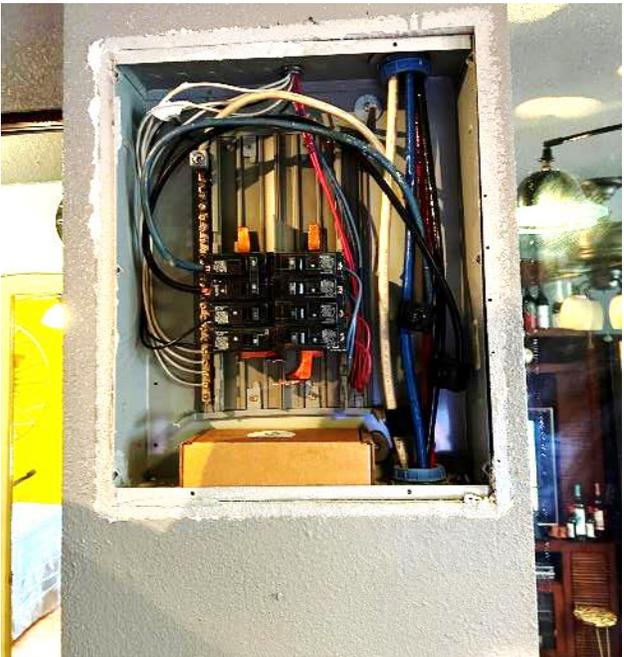

Midea

Gradient

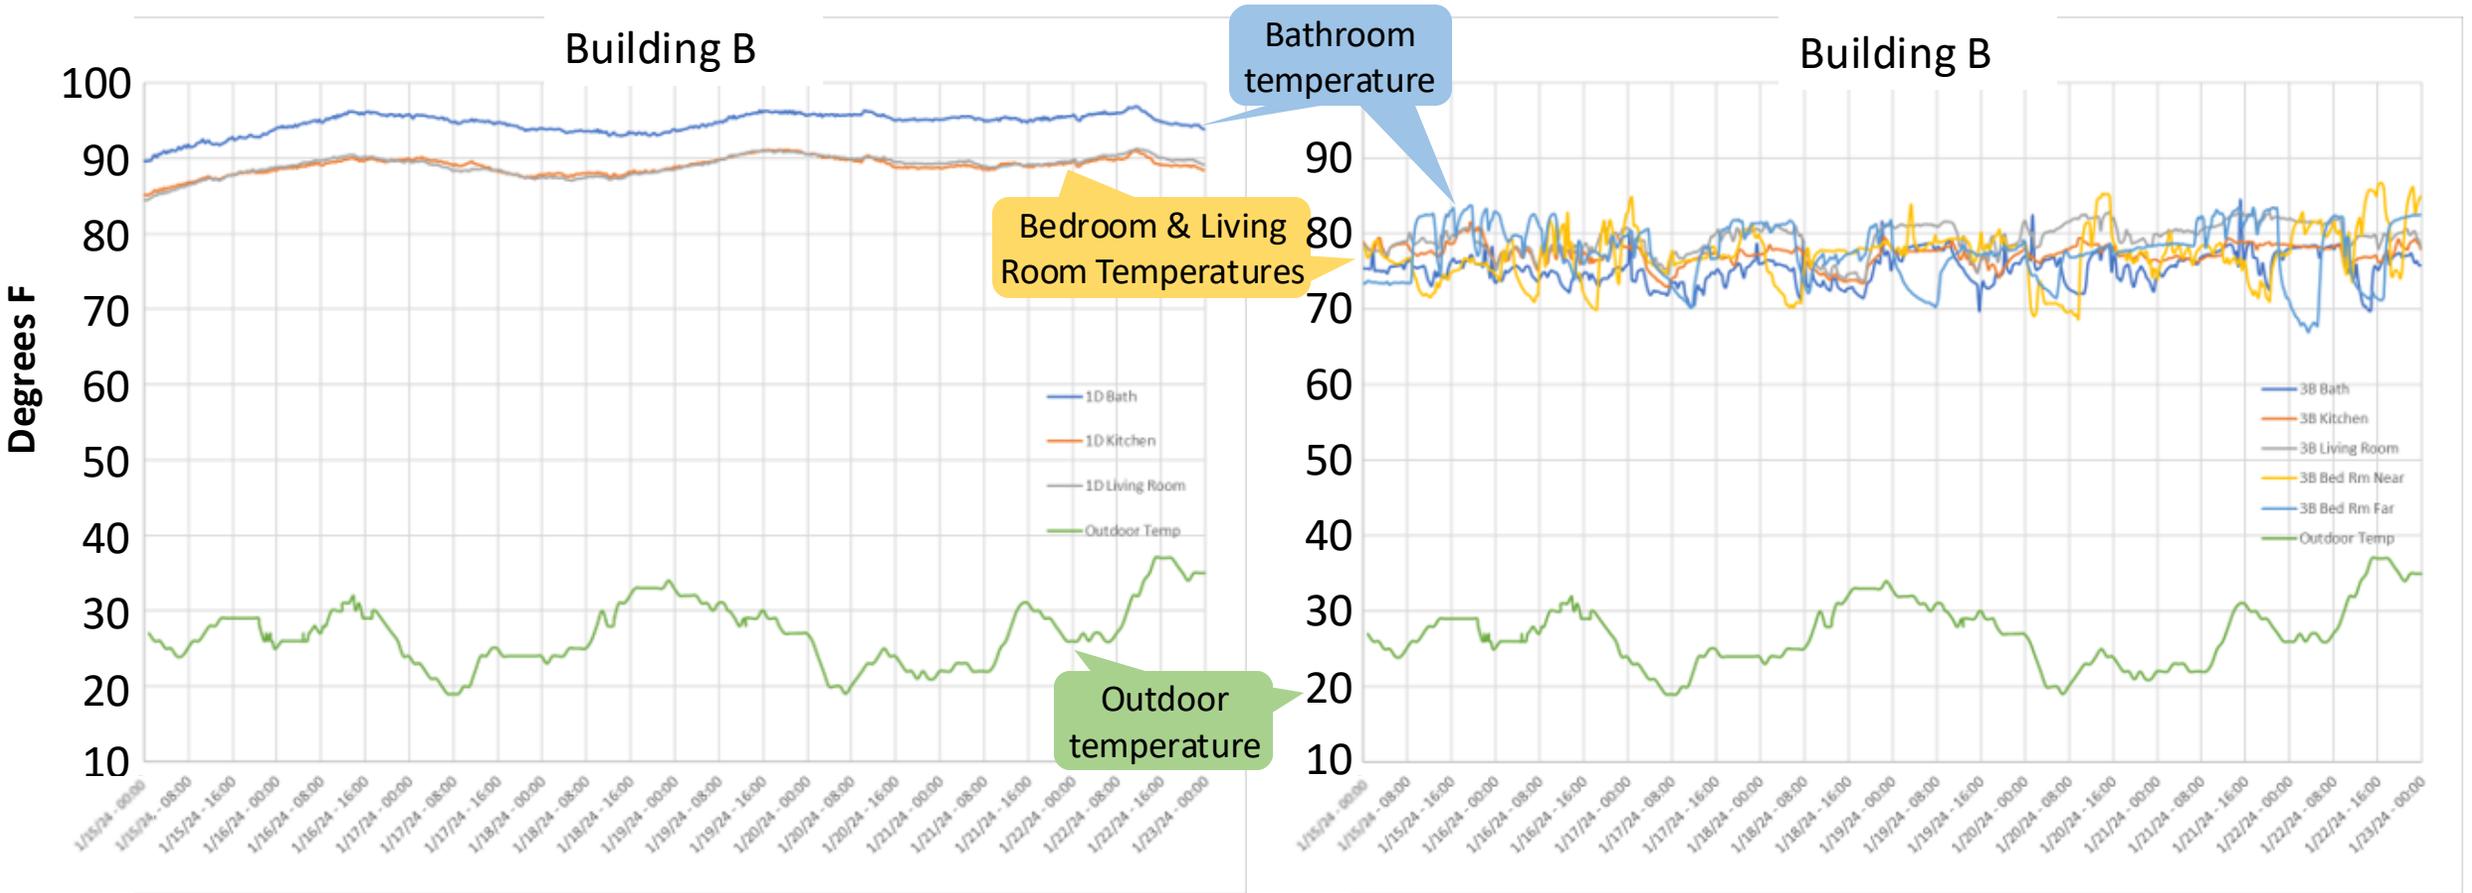

# Pilot installation completed by NYCHA maintenance staff with 24 apartments completed in 8 days (excluding outlets)

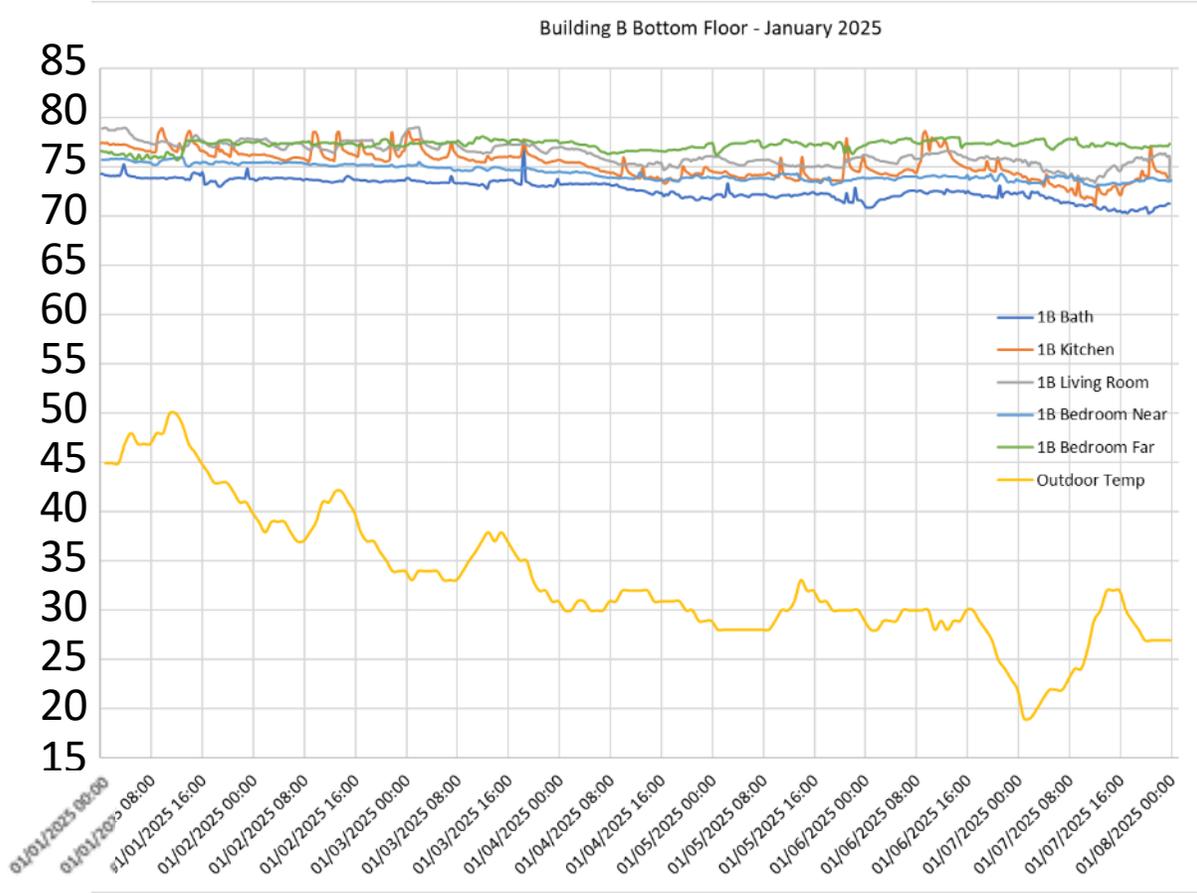

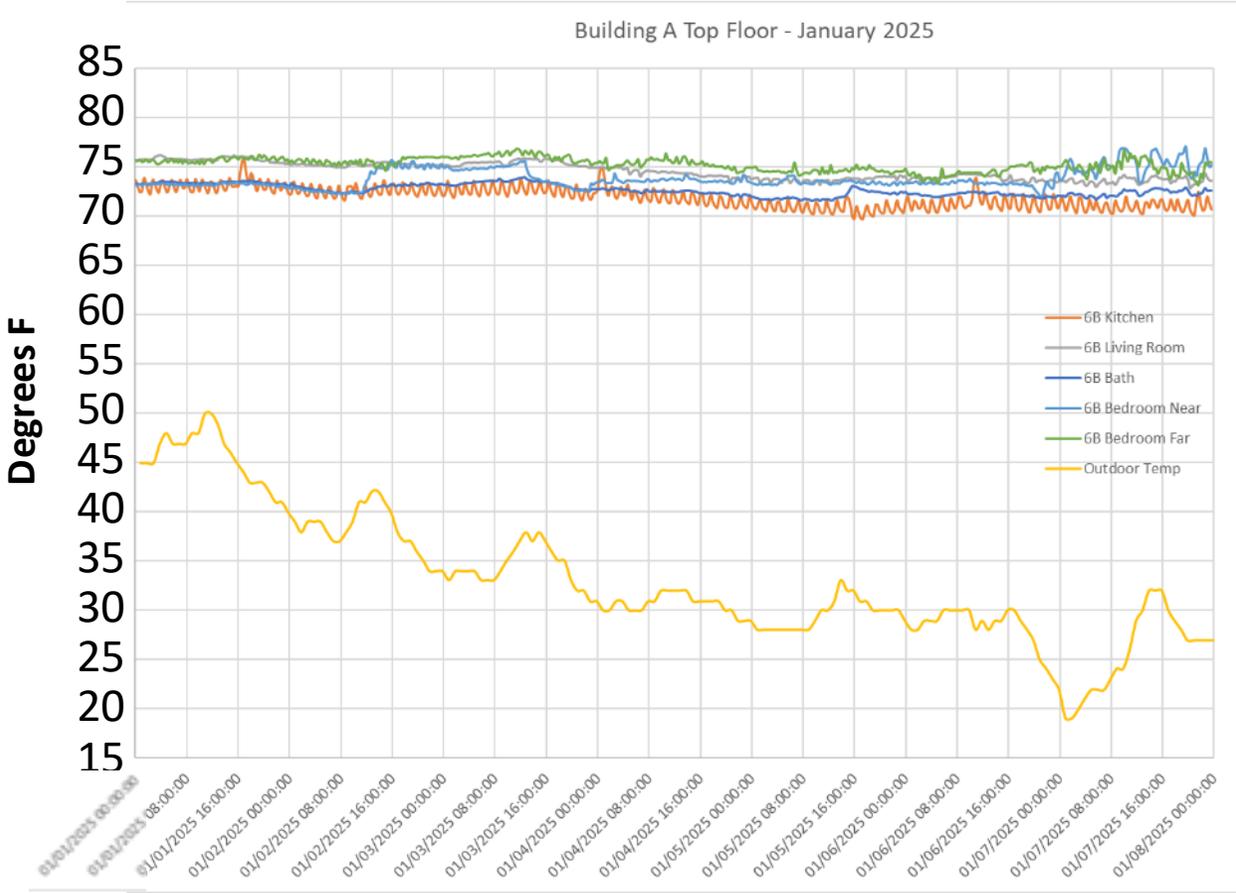

# Preliminary Results: Consistent, comfortable temperatures

## Control Apartment (Steam System)

## Apartment with Window Heat Pump Units

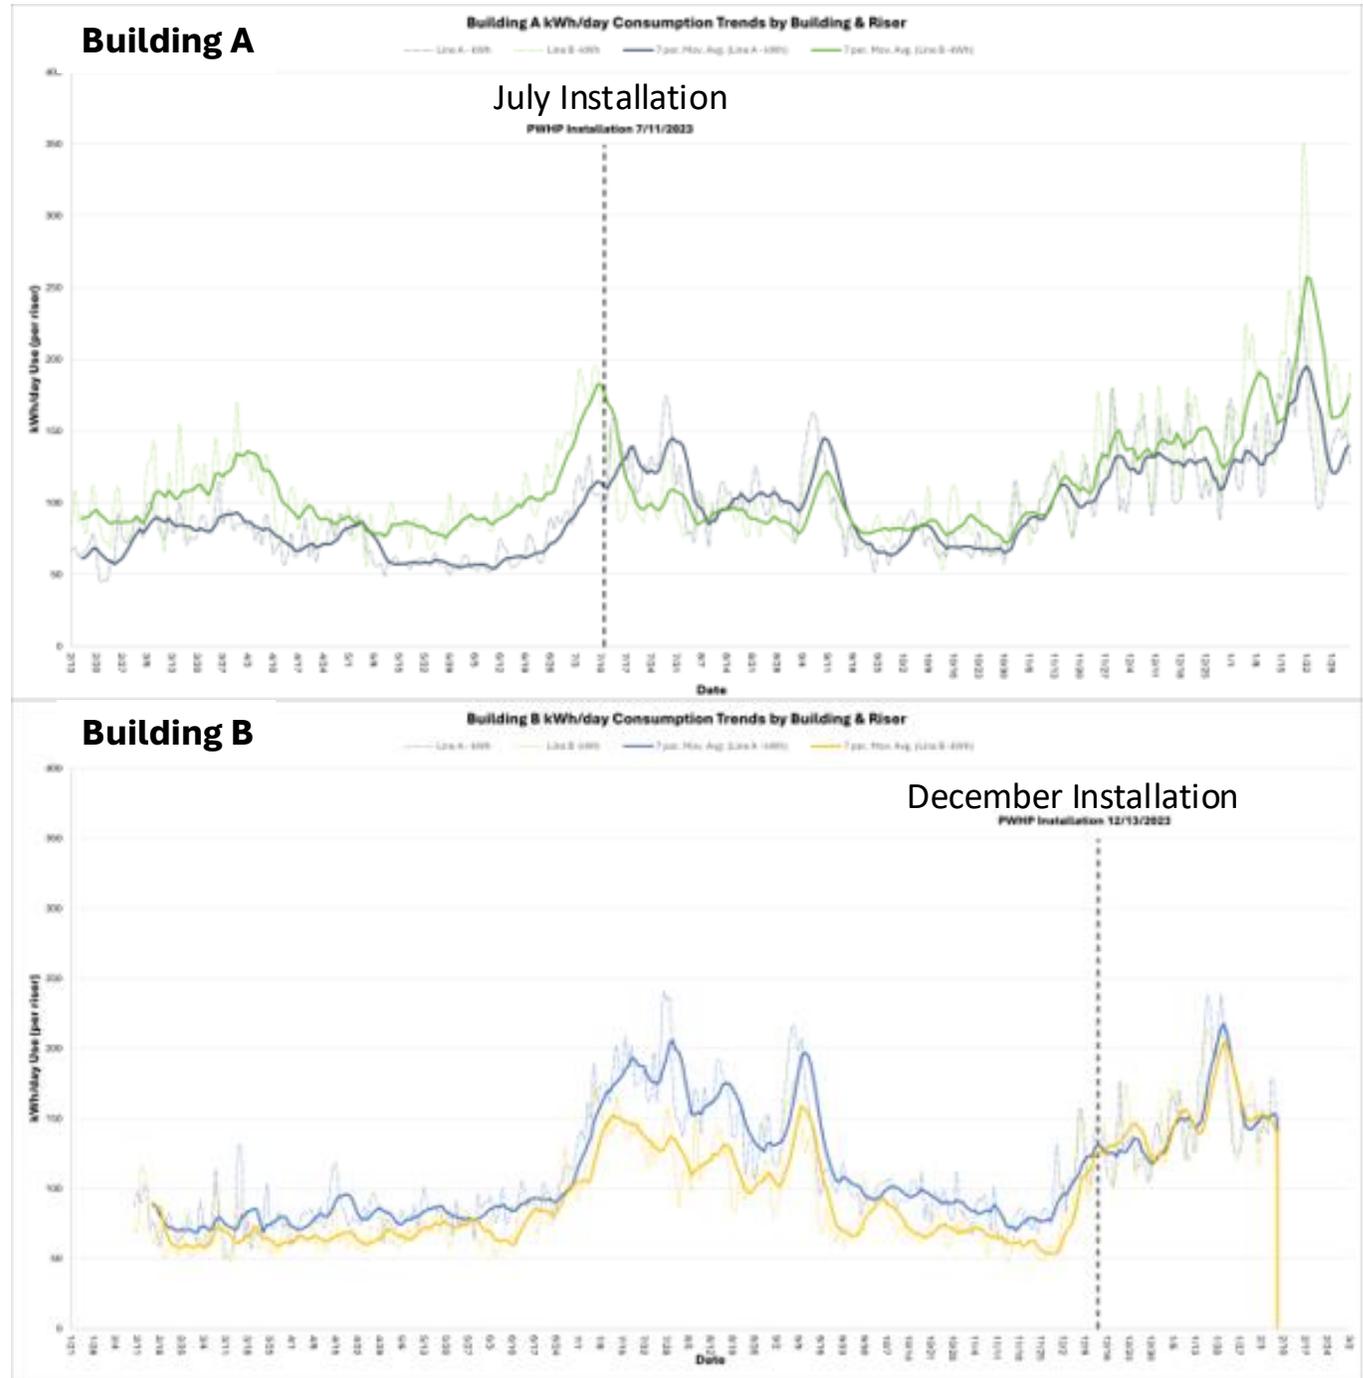

# Consistent temperatures despite fluctuating outdoor temps

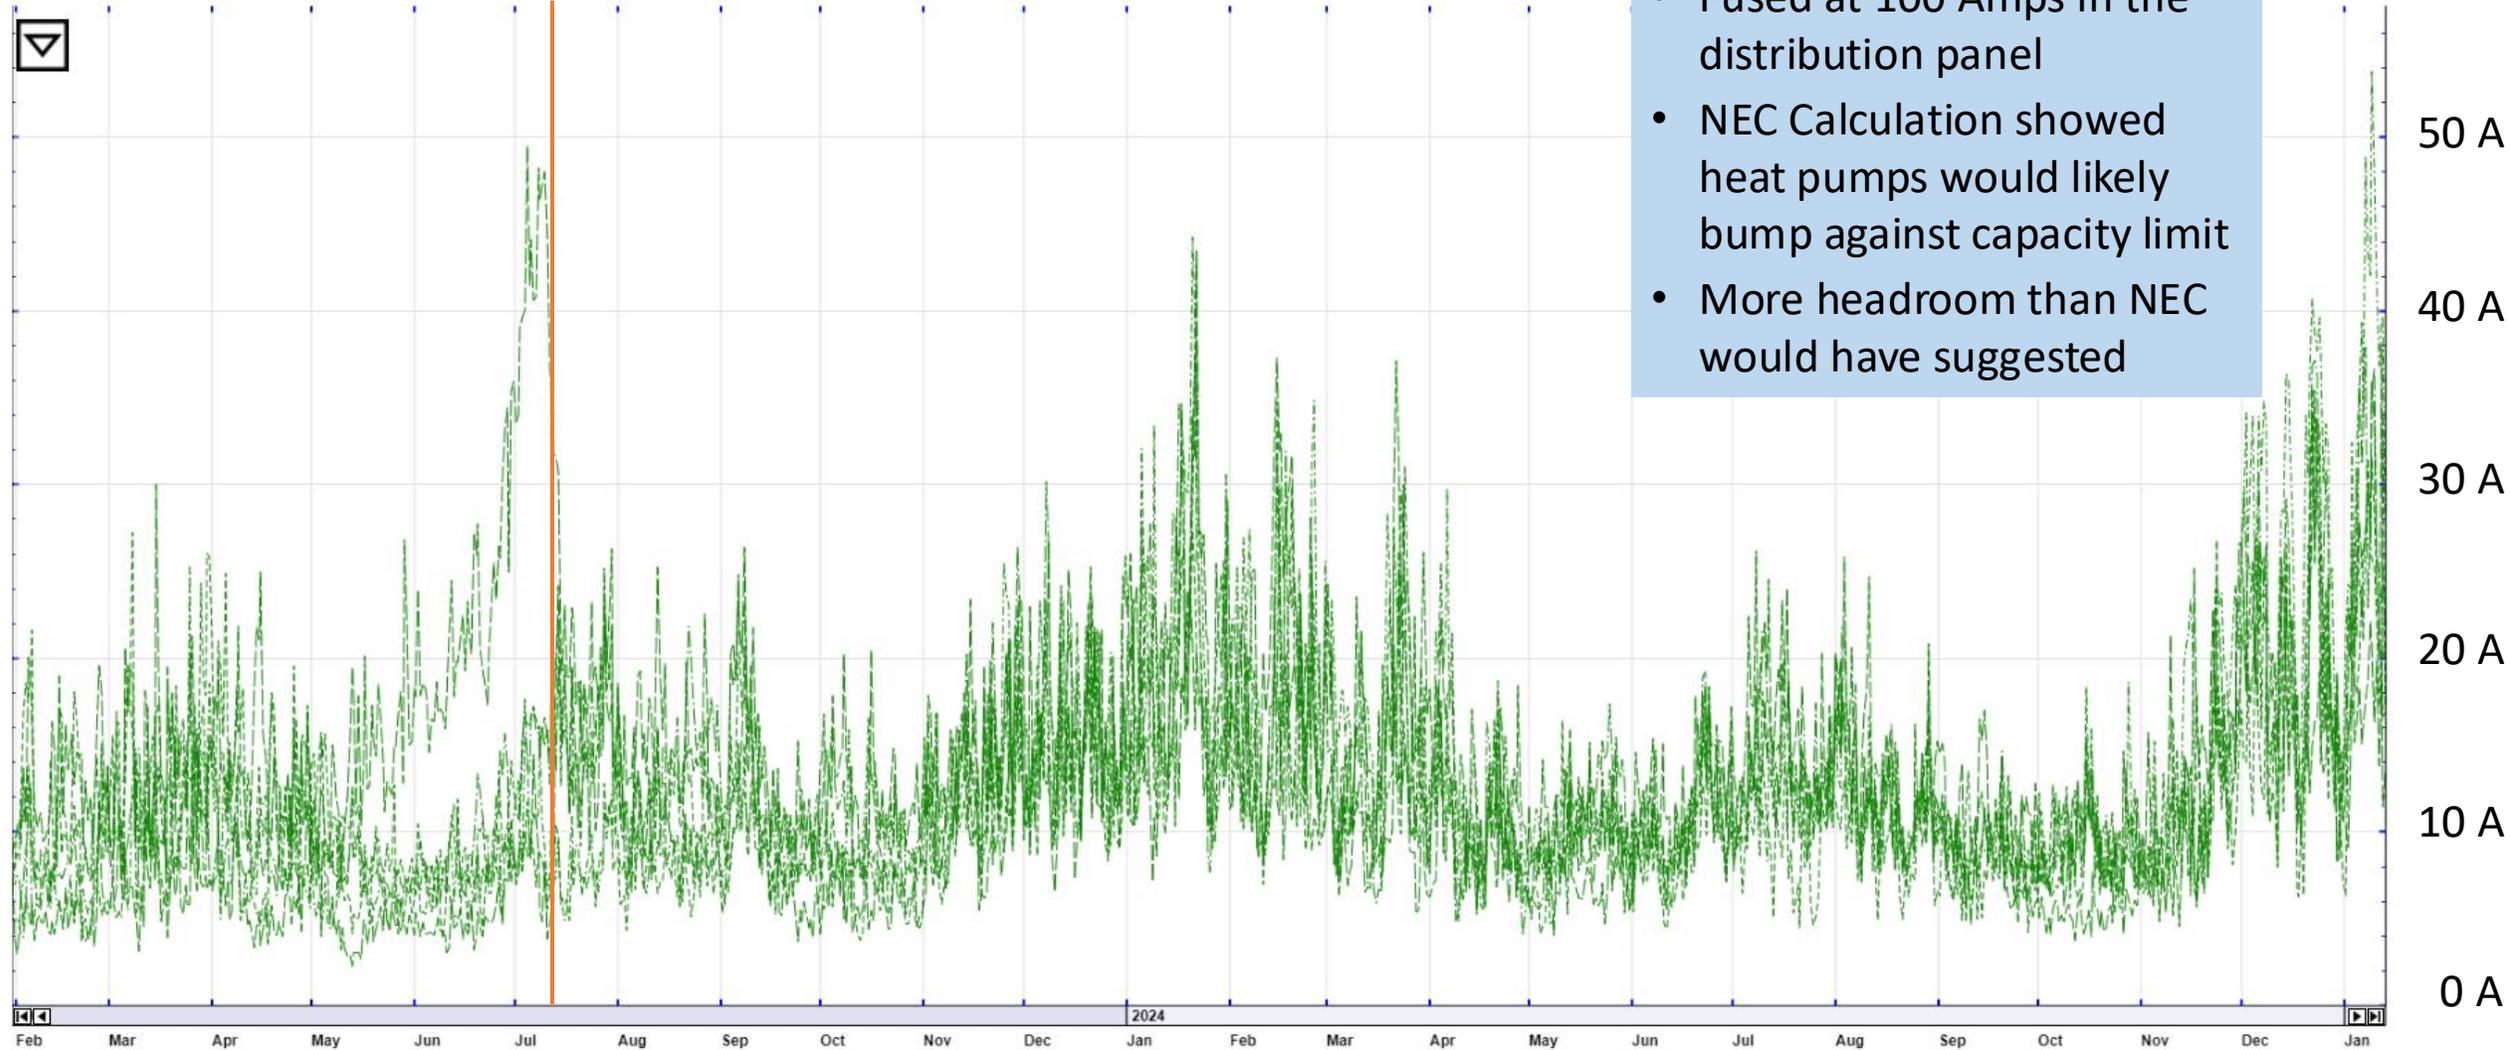

# Increase in kWh per day, but not a large one, despite doubling the number of heat pumps installed vs. the number of removed window ACs

- Slight drop in summer kwh/day after building A install
- Winter demand peak was about the same as the summer peak in building B despite doubling the number of heat pumps vs window ACs
  - Note: 2023-24 heating season was relatively mild, but still had a few periods colder than 17 degrees F

# Metering showed that existing risers were only being loaded to ~30% of max capacity

July 2023 Installation

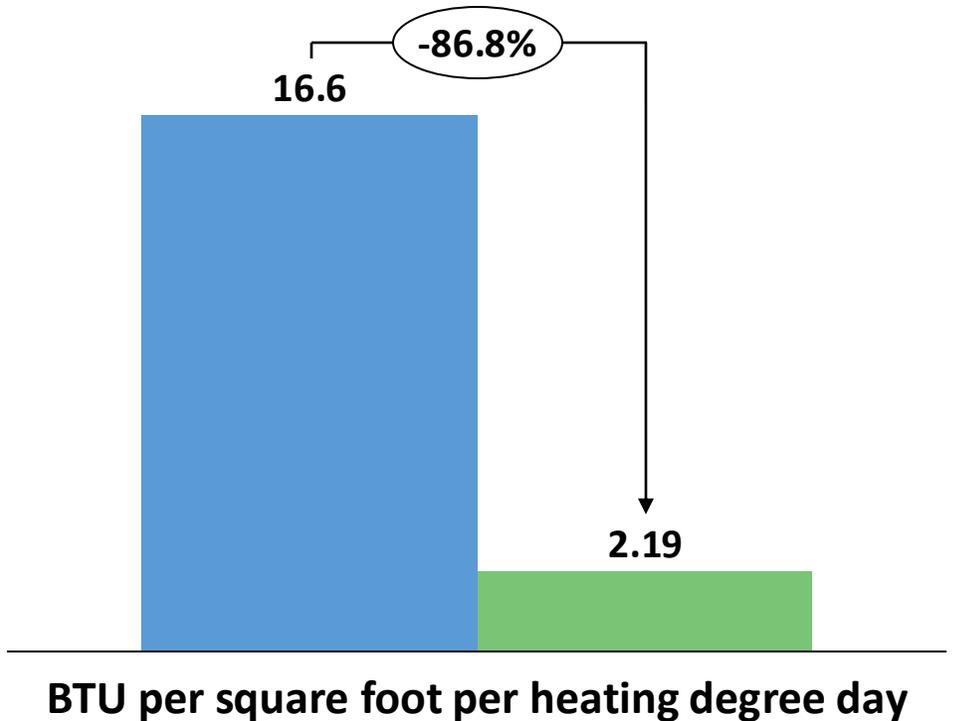

- Risers rated for 130 Amps
- Fused at 100 Amps in the distribution panel
- NEC Calculation showed heat pumps would likely bump against capacity limit
- More headroom than NEC would have suggested

# Preliminary Results: 87% decrease in site energy use and 50% decrease in energy cost

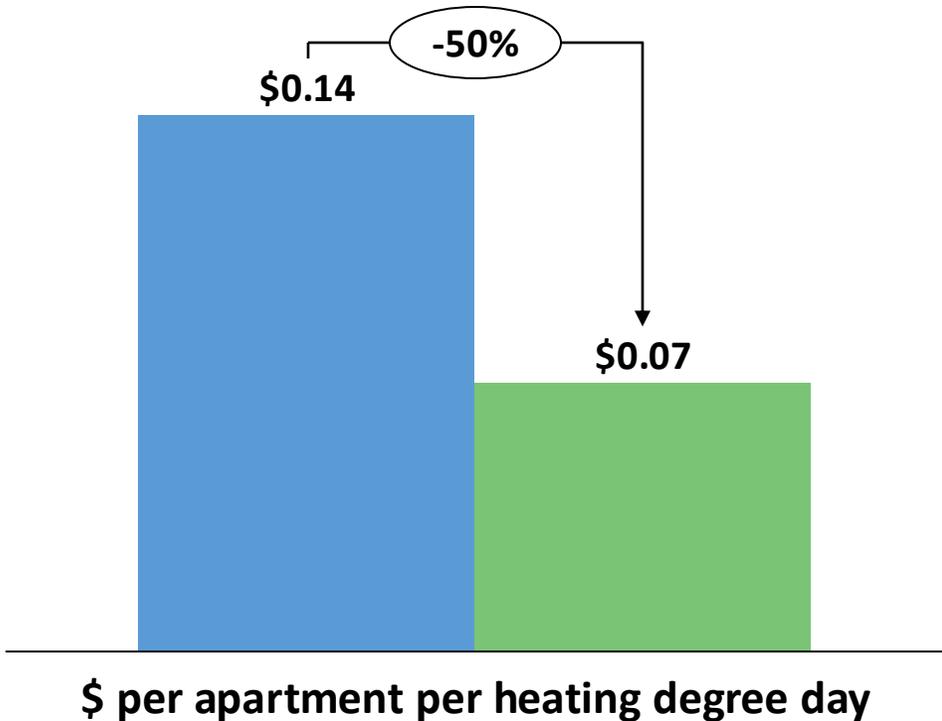

### 87% decrease in site energy consumed

- Steam System (Space Heating Only)
- Window Heat Pump Unit

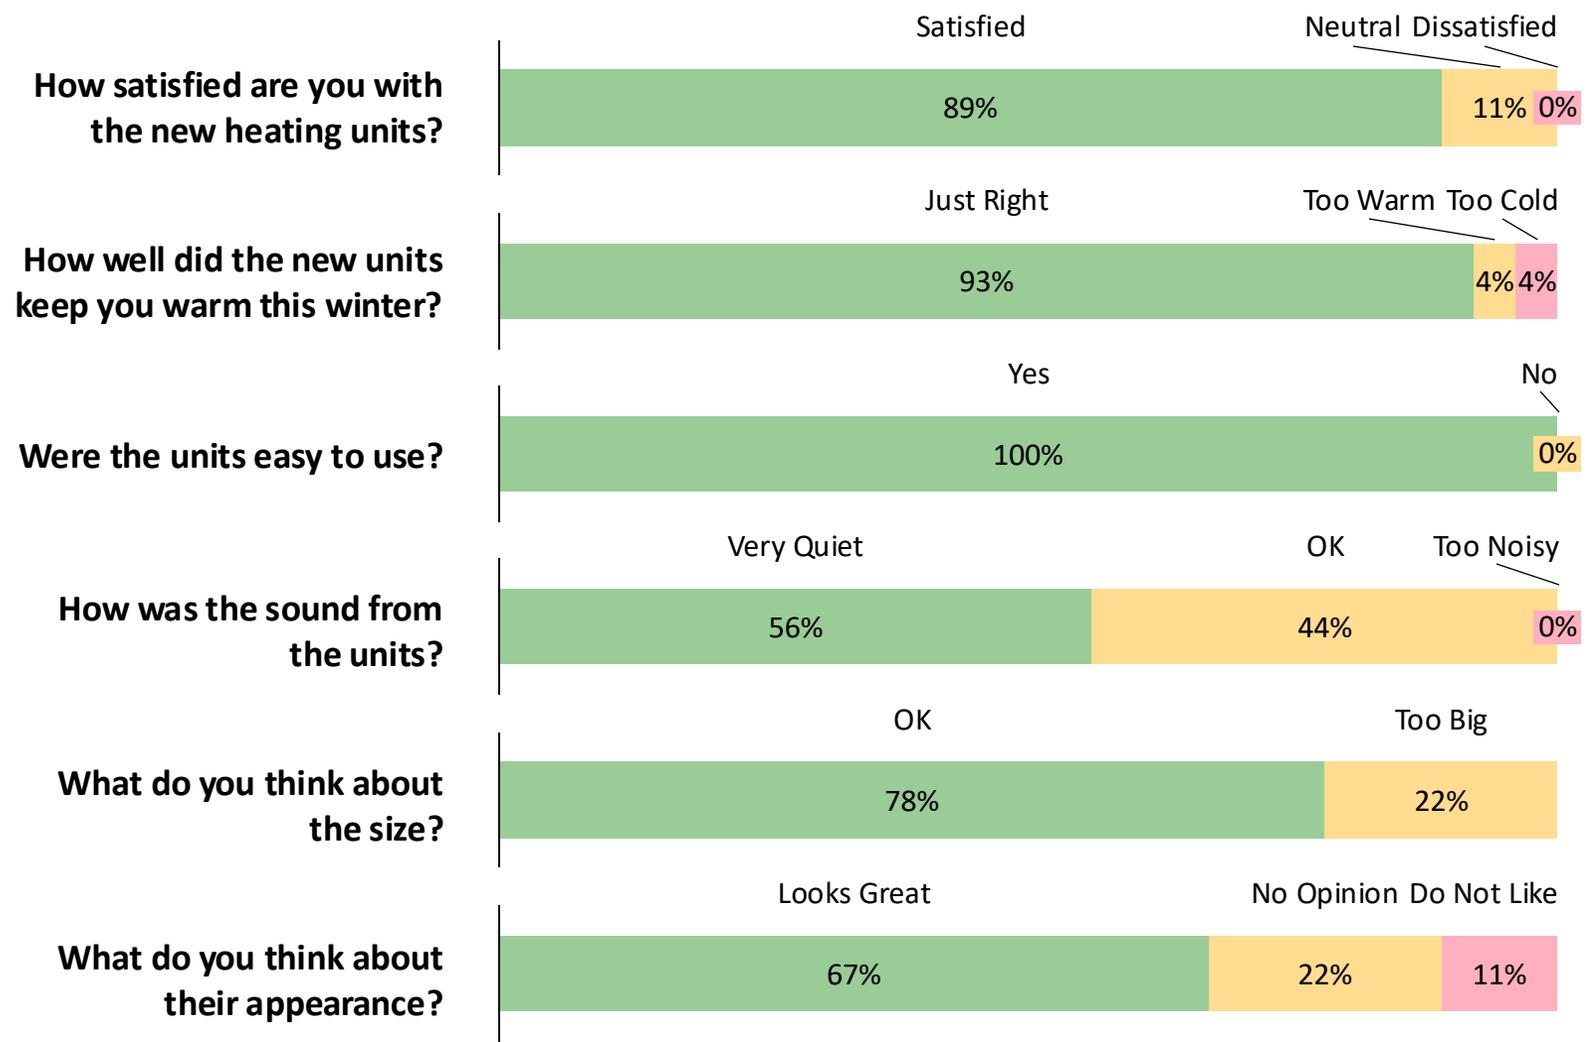

### 50% decrease in cost of energy

- Steam System (Space Heating Only)
- Window Heat Pump Unit

Based on average results from both manufacturers

# Preliminary Results: Initial resident feedback: very positive

Notes: n = 72 responses

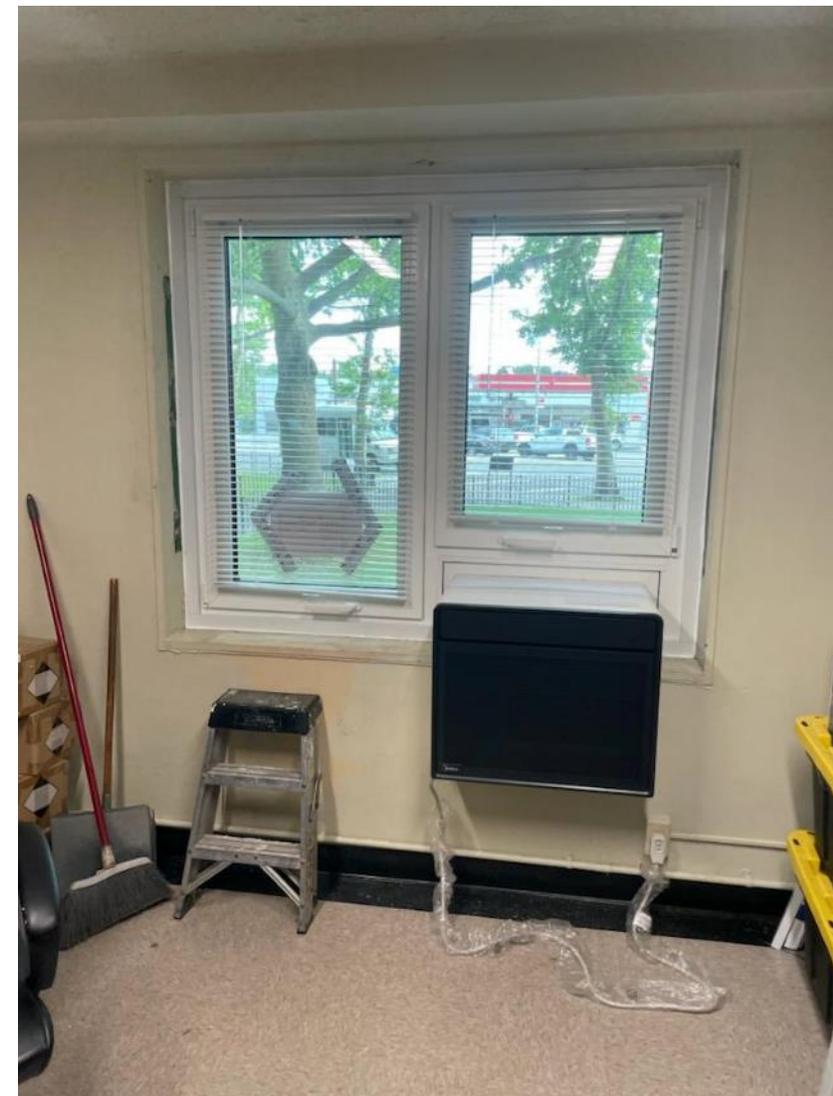

# Lessons Learned

- **Successes**

- Produced and demonstrated viability of 120V cold climate room heat pumps within three years of RFP launch
- Exceeded expectations for both efficiency and price point
- Residents almost unanimously preferred the heat pumps
- Demonstrated a new model for public–private partnerships through customer-centric process of R&D
- Involved residents in the M&V and feedback process

- **Challenges**

- Buy-in from key stakeholders takes time to develop
- Questions about long-term reliability and O&M can only be answered through more runtime and larger sample sizes
- Obstacles in existing building codes and hazmat regulations must be examined and very possibly amended.

Clean Heat for All

# Window Heat Pump Demonstration Program

NEW  
YORK  
STATE

NYSERDA

# Packaged Window Heat Pumps (PWHPs)

## Potential Market Impact & NYSERDA Program Strategy

### ACEEE Study:

- Avg. PWHP retrofit cost: **\$14,500/apartment.**
- Avg. ‘large-scale heat pump’ retrofit cost: **\$22,000-\$30,000/apartment.**

### Cadmus cost data analysis (HPD retrofits):

- Avg. VRF or mini-split cost (including electrical upgrades): **\$40,000/apartment.**

PWHPs can enable a quicker, more cost-effective transition to a clean energy economy in NY. NYSERDA’s Window Heat Pump Demonstration Program is a bridge to larger-scale PWHP adoption.

# Window Heat Pump Demonstration Program (PON 6037)

## Phase One

- List of packaged window heat pump (PWHP) performance specifications.
- Applicants must submit documentation that products meet specs.
- Upon acceptance, applicants will become Qualified Participants and eligible for Phase Two.

## Phase Two

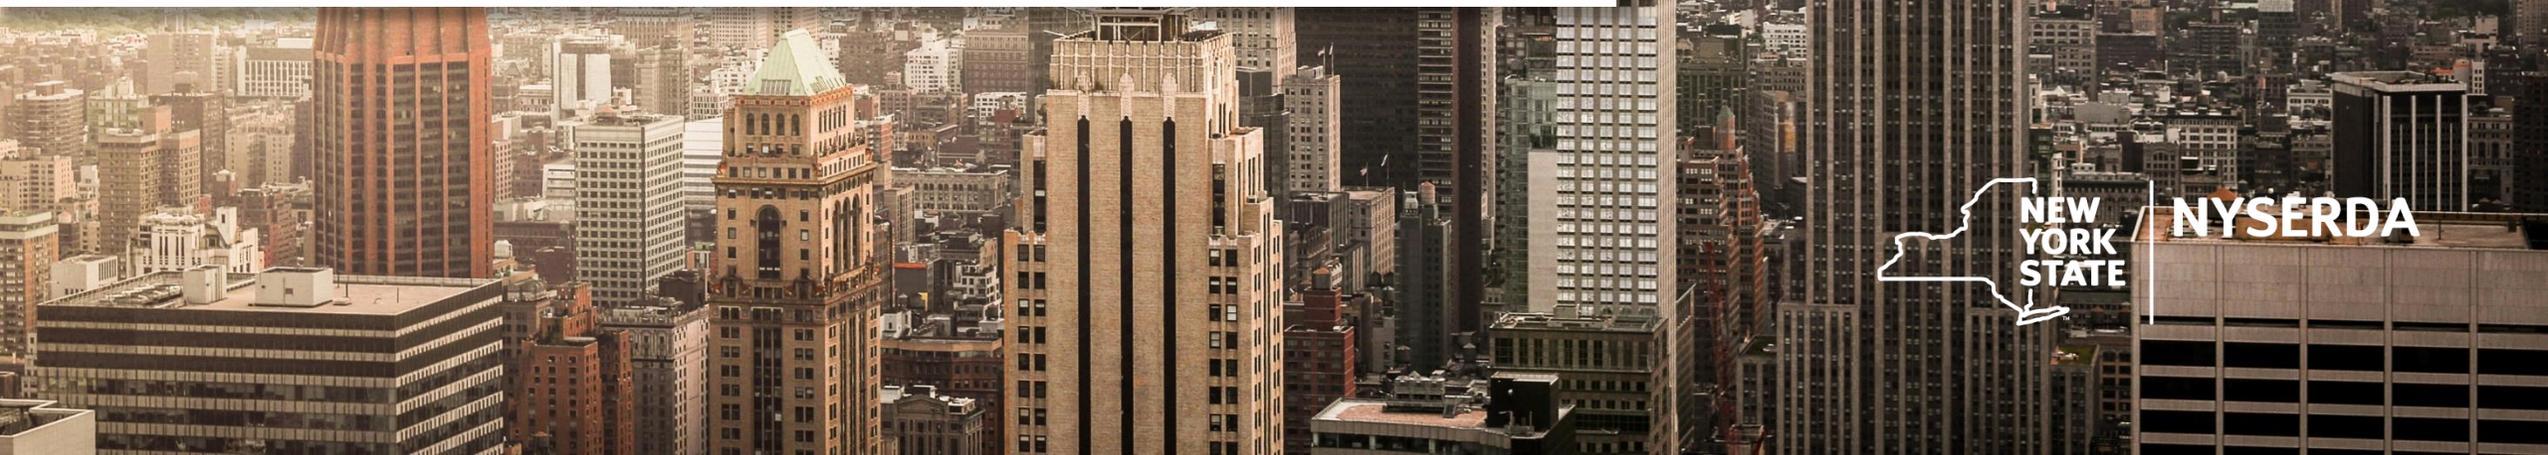

***Note: only available to Participants qualified under Phase One***

- Provides \$10M in incentives for PWHP installation.
  - 50% of PWHP costs up to \$2,250, for affordable housing.
  - Up to \$1,500 per PWHP for market rate.
  - Per-project cap: \$500,000
- Includes performance monitoring.

Please see PON for more detailed information & email [PON6037@nyserda.ny.gov](mailto:PON6037@nyserda.ny.gov) with any questions.

Clean Heat for All

# Packaged Terminal Heat Pump Program

NEW  
YORK  
STATE

NYSERDA

# Manufacturer and Building owner engagement informed the development of technical and operational specifications

Owners and Operators

Manufacturers

# Issued product specifications aimed to be ambitious yet attainable and address key barriers to adoption

- Compatible with existing wall openings
- Use will not require street or building electric upgrades
- Have high-efficiency, cold-climate operation
- Possess flexible condensate management approaches for diverse building needs
- Improve indoor air quality by delivering outdoor air with energy recovery capability

## **Heating**

- NEEP ccASHP v4.0 for PTHPs
- 100% capacity to 5°F without electric resistance heating
- Winter sCOP of 3.0

## **Cooling**

- SEER2 18.0

## **Acoustics**

- $\leq 35$  dB(A)

**ERV with at least 45 CFM and ER with 60% efficacy**

**Intelligent controls and grid integration**

# The PTHP Program sought proposals for 3 categories of through-wall heat pumps

## Classic PTAC

### Typical Dimensions

- $\geq 16''$  H x  $\geq 42''$  W (10 CFR 431.92.)

### Typical Features

- 240V
- Gas or electric resistance heating

## Hydronic PTAC

### Typical Dimensions

- 16" H x 42" W
- 15 1/2" H x 40 3/4" W
- 15 1/2" H x 36 3/4" W

### Typical Features

- 120V or 240V
- Hydronic heating coils

## Through-Wall AC

### Typical Dimensions

- 14 1/4" H x 24 1/4" W
- 15 3/4" H x 26" W
- 15 3/4" H x 23 3/4"

### Typical Features

- 120V
- No heating

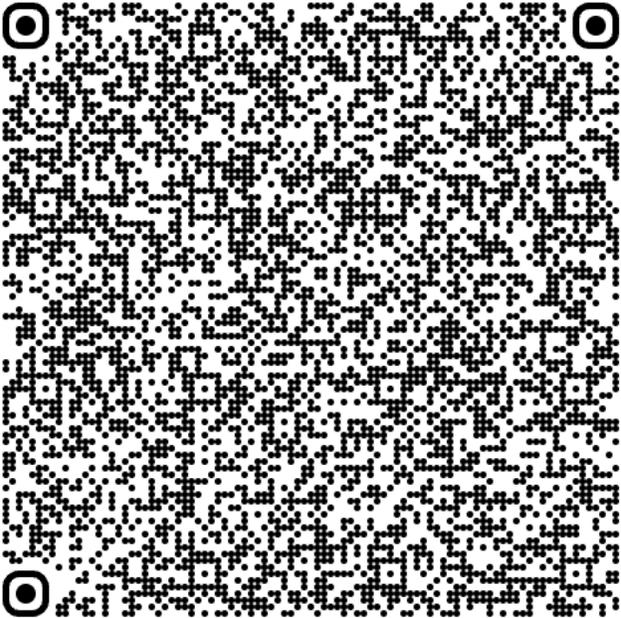

# Apply to host PTHP Field Demonstrations (RFQL 5937)

NYSERDA invites applications from **multifamily building owners, managers or operators** for their buildings to become Qualified Demonstration Sites for advanced cold-climate Packaged Terminal Heat Pumps.

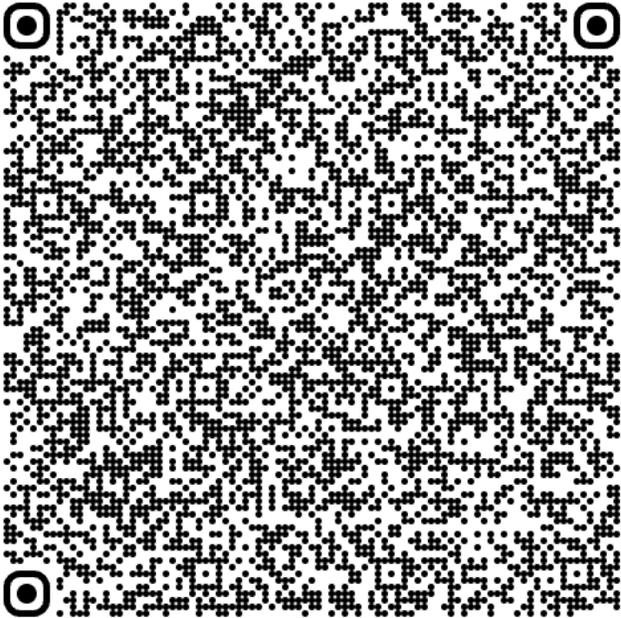

To be eligible, submitted buildings must:

- Be in New York State
- Have 5 or more *continuously occupied* dwelling units
- Have through-wall openings suitable for PTHP installation
- Available for field demonstrations beginning no later than the 2026 heating season (October 2026)
- Affordable housing: Attest that implementation of PTHP demonstration will not result in shifting of heating costs from the landlord to the tenants, or plan to offset cost shift to affected tenants.

# Learn More / Apply to these NYSERDA Programs!

**Through Wall Heat Pump  
Demonstration Program  
(RFQL 5937)**

**Window Heat Pump  
Demonstration Program  
(PON 6037)**

# California Needs Room Heat Pumps Too!

Elaine Miller, Senior Strategy Manager, CalMTA  
October 15, 2025

# Current CA opportunity... and challenge

## Heating and cooling represent the largest energy consumption end-uses for homes in California.

- More than 3 million individual AC units in use across the state and 50% of households using gas appliances for heating.
- RHPs are a great solution, especially for MF, especially for ESJ communities.
- ... but current products don't work in over 70% of MF rooms and over 50% of SF rooms\* in CA housing stock.

*\* based on assessment of bedrooms and living rooms*

# Meet CalMTA

- CPUC created a Market Transformation Framework
- Funded for \$310 million through 2030
- Resource Innovations named Administrator and supported by other expert firms
- CalMTA develops & manages MT initiatives (MTIs) with MT Advisory Board input
- First two initiatives are in CPUC review; would deliver over \$1B in TSB over their 20-year lifetimes

# Programs and ideas in process

**Room Heat Pumps**

**Induction Cooking**

**Commercial Rooftop Units**

**Residential Heat Pump Water Heating**

**Commercial Replacement & Attachment Window Solutions**

**Foodservice Water Heating Systems**

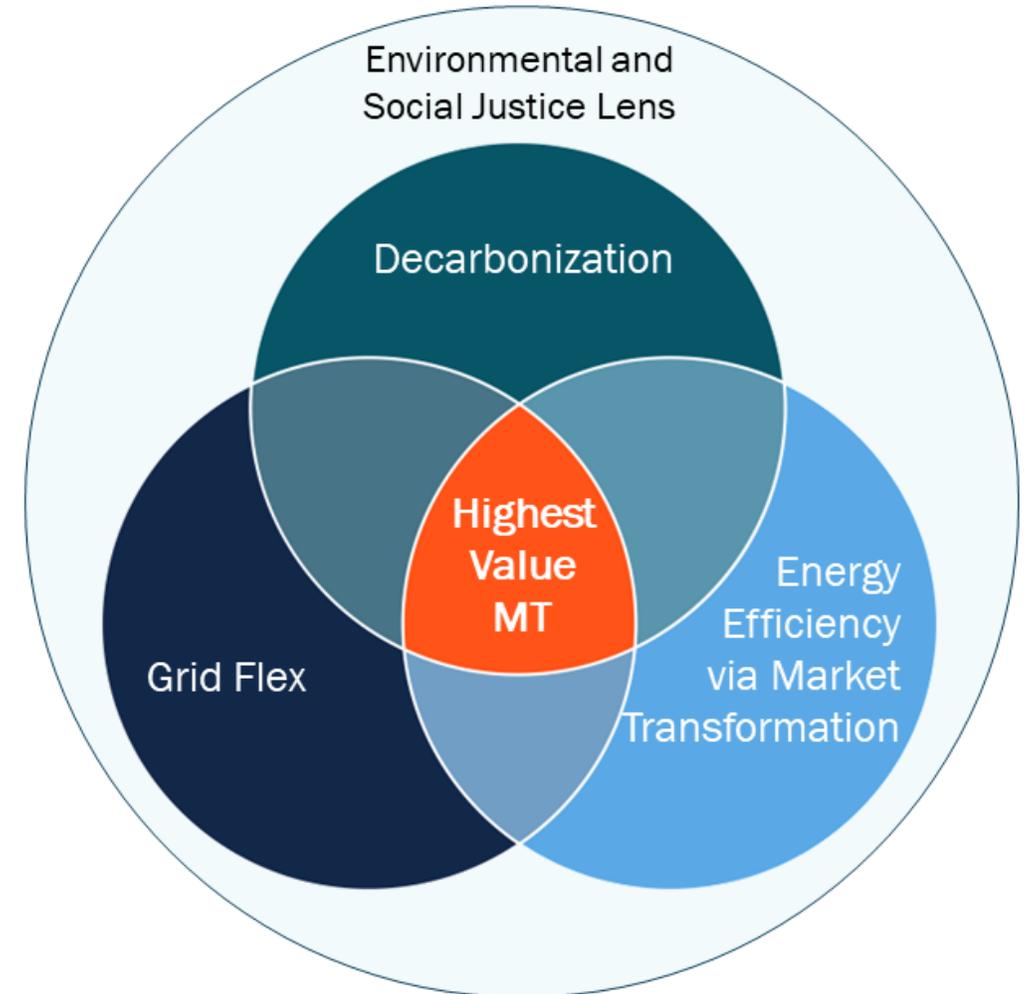

**Commercial Building Efficiency Accelerator**

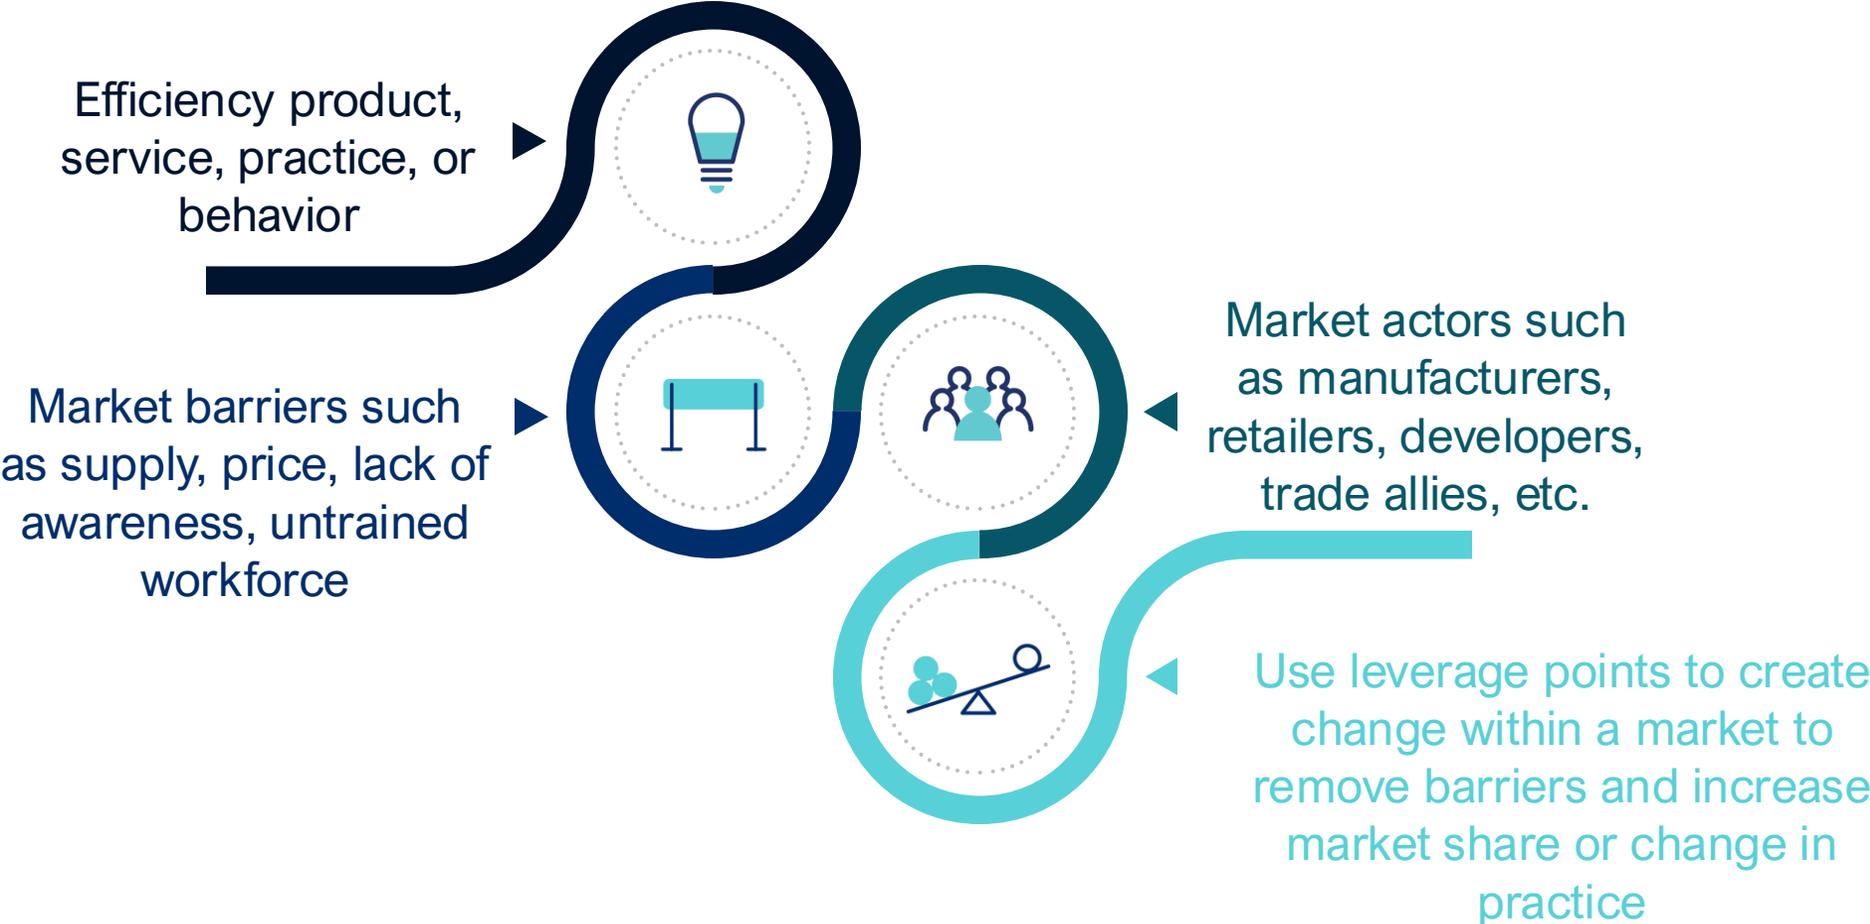

# How we work

- Ensure selected initiatives meet MT criteria
- Collaborate with existing EE efforts
  - Avoid duplication
  - Faster scale
- Advance other state goals:
  - GHG reduction
  - Workforce education & training
  - Environmental and social justice (ESJ)
  - Grid health

# Strategic market intervention

# RHP market potential for California

|                          | <b>Market Potential Unit<br/>Estimates 2024-2045<br/>(Millions)*</b> |
|--------------------------|--|
| Multifamily households   | 1.21   |
| Single-family households | 1.84   |
| <b>TOTAL</b>             | <b>3.05</b>  |

\* From CalMTA Room Heat Pumps Market Transformation Initiative Appendix B: Market Forecasting & Cost-Effectiveness Modeling Approach [Appendix-B\\_MF-CE-Modeling\\_RHP.pdf](#)

# California programs interest in RHP

- Measure packages being developed for inclusion in **California Electronic Technical Resource Manual (eTRM)** and income-qualified **Energy Savings Assistance (ESA) Program**
- **TECH Clean California** (statewide initiative to accelerate adoption of HP technologies) evaluating for inclusion in multifamily program
- **California Heat Pump Partnership** (public-private alliance) interested in potential to support state's goal of 6M HPs adopted by 2030
- Comments submitted to encourage inclusion in future statewide **Plug Load & Appliance Program** and **HEEHRA Phase II** rebates (both retail channel)

# Available products for CA

## Primary focus is room air conditioners with reverse cycle

- traditional window heat pumps (d)
- saddlebag (b)
- U-shaped (c)
- through-the-wall (replacement only)

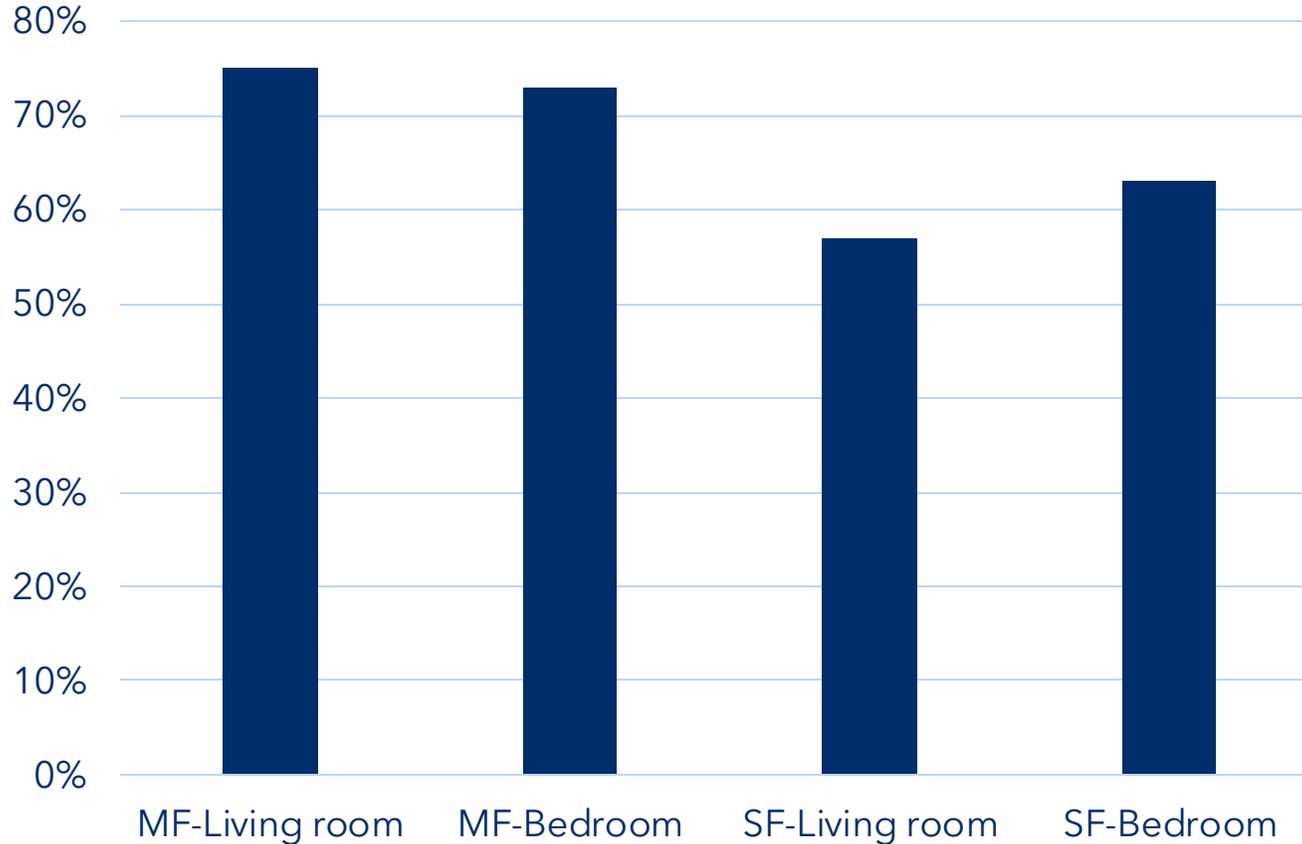

# Available products for CA

## Portable air conditioners with reverse cycle also included (a)

- Meets the need for vertical sliding and casement windows
- But current versions are not highly efficient and cannot operate at lower temperatures

# Rooms without vertical sliding windows

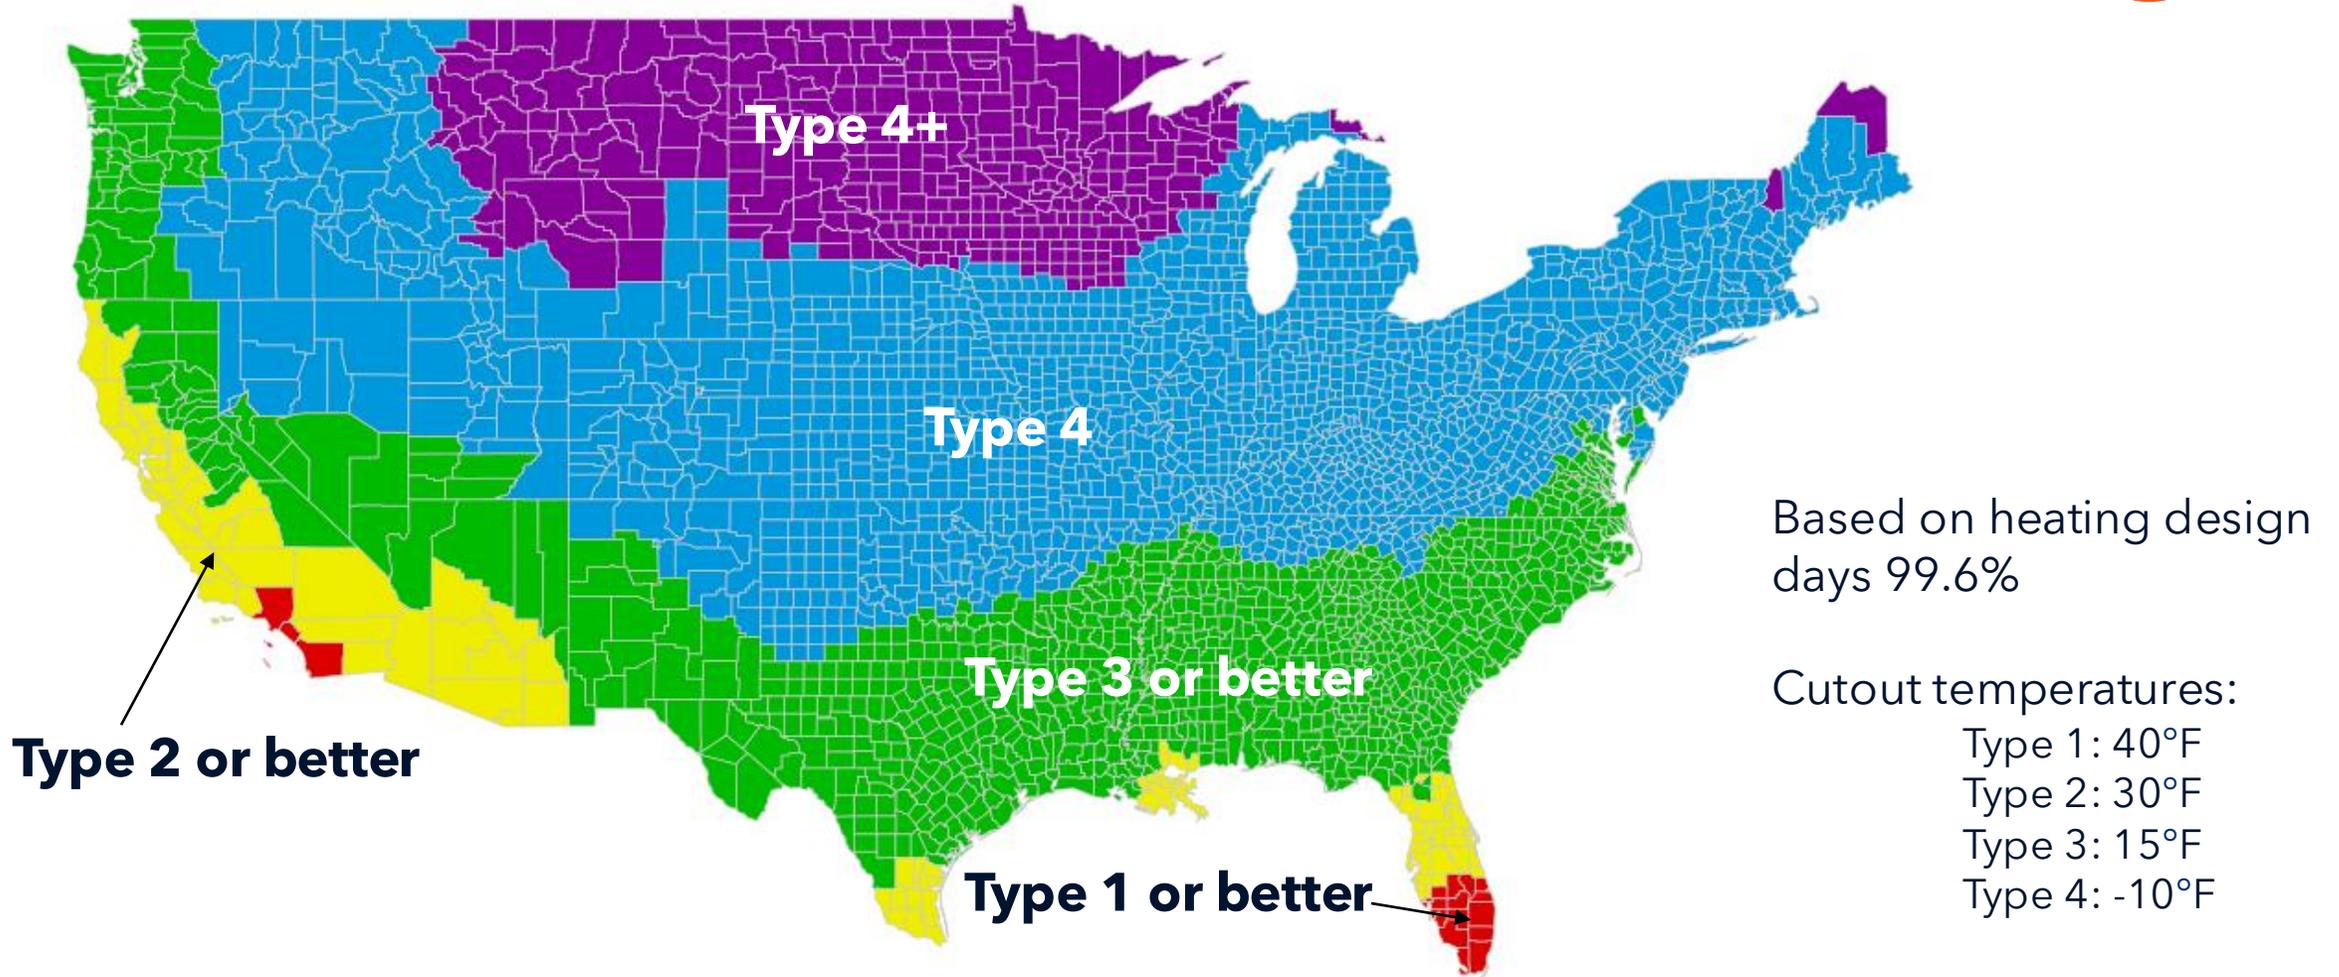

*SF: n=3,167, MF: n=1,600*

## CalMTA window stock survey findings

- More than 70% of California MF homes cannot use a traditional window heat pump
- More than 50% of California SF homes cannot use a traditional window heat pump
- Draft report, estimated release November

# What type of RHP do you need across the US?

*48% of population could use a Type 3 RHP*

# California window heat pump needs

- Need a variable-speed, 120V plug-in HP for narrow windows installation
- Does not have to be cold climate - Type 3 (< 17°F) is acceptable

## DRAFT PRODUCT SPECIFICATIONS

| Description                      | Minimum value |
|----------------------------------|---------------|
| Cooling capacity at 95°F (Btu/h) | 8,000         |
| Heating capacity at 47°F (Btu/h) | 8,000         |
| Capacity ratio (17°F/47°F)       | 70%           |
| CEER (Btu/W-h)                   | 14.4          |
| HEER (Btu/W-h)                   | 7.5           |
| Design window opening width (in) | 15*           |

*\*estimated to fit 75% of targeted horizontal sliding windows in CA*

# CalMTA's statewide room heat pump MTI

## Desired end state:

- Norm is to purchase RHPs instead of electric resistance heaters and AC window units
- RHPs are seen as a key technical solution to displacing GHG from inefficient heating

## Representative interventions:

- Influence and accelerate manufacturer development of affordable, 120V RHPs that fit into slider windows
- Engage property management firms, and MF building owners through incentives or bulk purchase pricing coupled with marketing support
- Build consumer acceptance and awareness through marketing and education campaigns
- Deploy midstream stocking incentives that motivate retailers stock and sales

# Building demand in CA

- Similar to Clean Heat for All but for slider windows
- No large, single point of aggregation in CA
- Looking at other demand aggregation approaches
  - Support inclusion of RHPs in customer EE programs, climate resilience programs
  - Support demonstration projects
  - Develop bulk purchases buy down agreements
  - Motivate retailers to assort more RHP products

Elaine Miller, [ecmiller@calmta.org](mailto:ecmiller@calmta.org), 503-490-9877

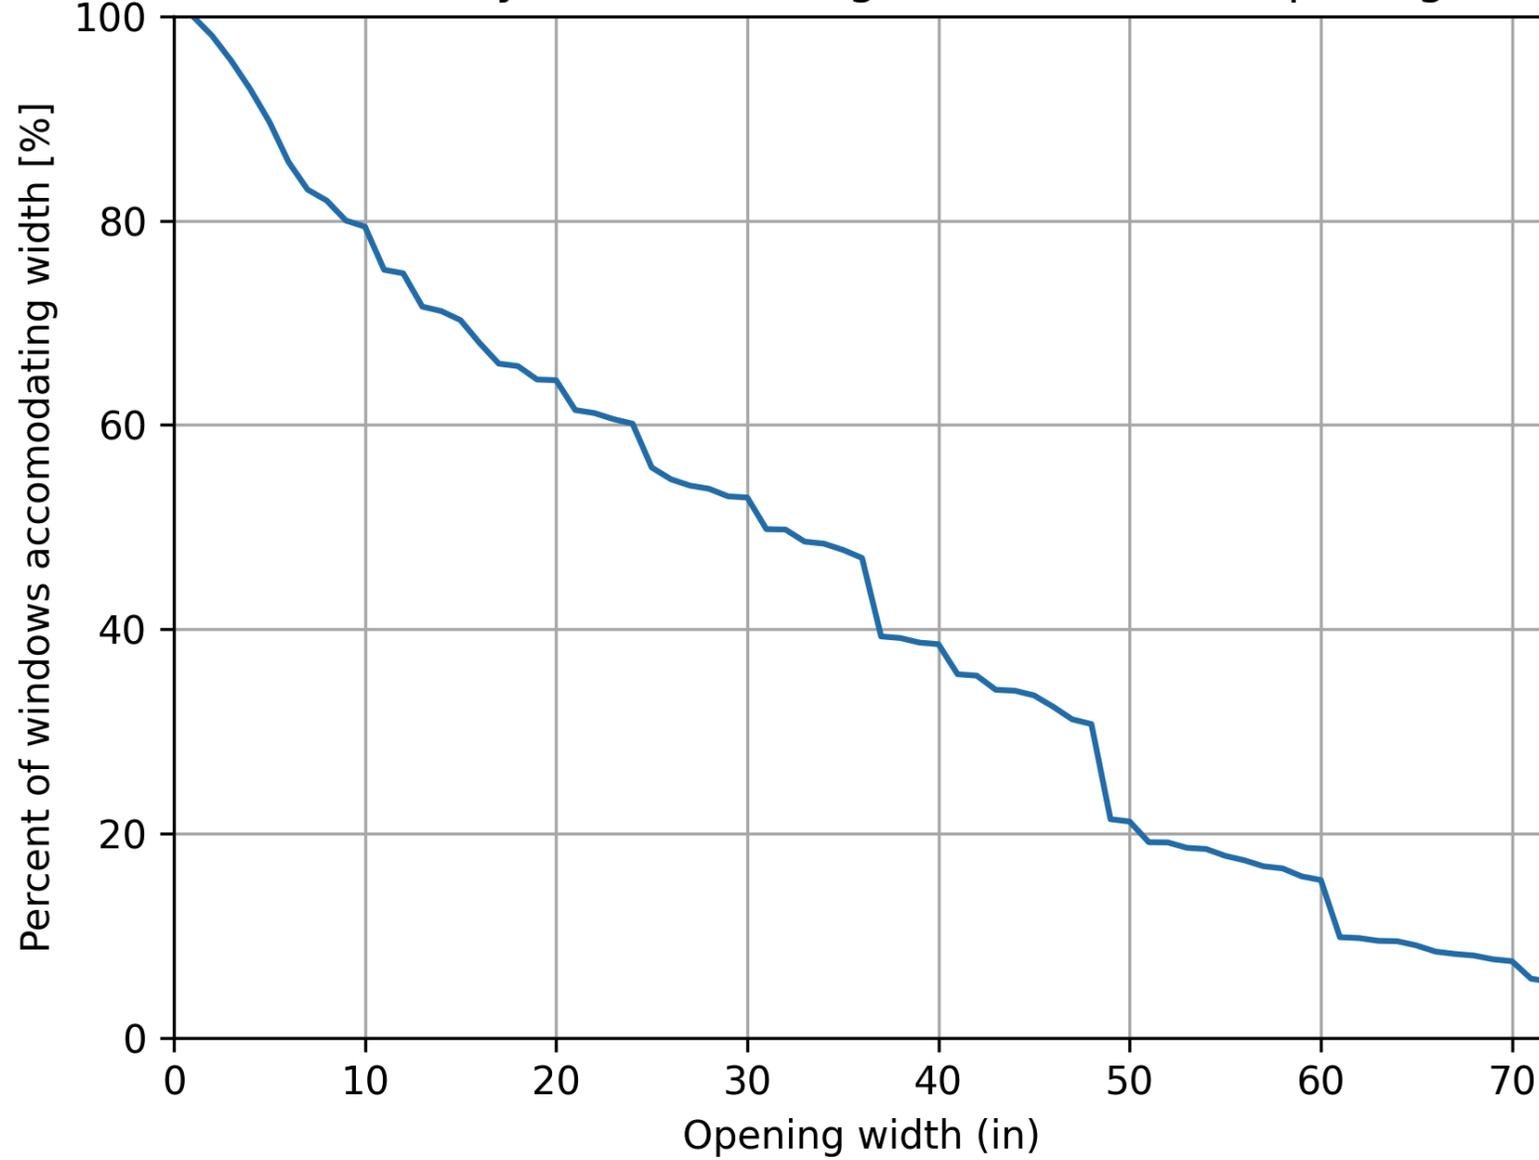

# Transformative Energy Solutions for the public good

Market transformation is a proven approach that works to remove market barriers so that energy efficient, equitable, and climate-friendly approaches become the new standard practice for all Californians.
